---

Dear Hiring Manager,

I'm a Full-Stack Developer with 2+ years of experience building web applications and internal tools with React, Next.js, Node.js/Express and TypeScript, and I'd like to join your team as a Full-Stack or Software Developer.

At Newborn Screening Center - Southern Luzon, I started as a Computer Programmer and became one of two IT Managers in November 2026. I support IT operations and still build the systems the laboratory and administrative teams use every day. My main project is a Corporate Dashboard that reads Oracle and MySQL data and replaces manual Excel reports and an unsupported legacy LIMS. The reports were slow on large tables, so I added indexes, rewrote queries, reduced database calls per page and added summary tables, which improved system performance by 40%. I also built a File Management System with department-based access and built-in team chat in response to an ISO accreditation finding.

Outside work, I built a Job Application Assistant with encrypted data, GitHub sign-in and 800+ automated tests. You can try four of my projects with sample data at johnadrian.dev, each with a short case study on how it was built.

I'm open to remote or hybrid roles in the Philippines and remote roles overseas, and I'm flexible with time zones. I'd welcome the chance to talk about how I can help your team. Thank you for your time and consideration.

Sincerely,

John Adrian Ticatic
